ExtraHop

Cloud App Monitoring Solution

## Get the Real-Time Insights You Need to Manage Shadow IT

ExtraHop equips IT departments with unprecedented insight the cloud applications in use within their organization. With real-time analysis of wire data, IT teams can identify users that are consuming excessive bandwidth or violating company policy, as well as work with departments to better support legitimate cloud application usage.

Gain Visibility Into Shadow IT

Increasingly, marketing, sales, HR, and finance departments are setting up and using cloud applications without going through the IT department. While cloud applications such as Dropbox, Salesforce, Google Docs, and Eloqua offer significant benefits, IT departments need visibility into how these legitimate applications, as well as other multimedia and social networking applications, are being used.

ExtraHop passively analyzes all user activity passing over the wire so that the IT department has the insights they need to track and support cloud applications.

- **Automatic discovery –** Out-of-the-box, you can see the activity of various cloud applications for email, marketing, multimedia, social networking, and storage.

- **Easy extensibility –** Define additional cloud applications to be monitored within minutes.

- **Detailed and contextual analysis –** Take quick action with details for cloud application usage, including not only which applications are being used, but by whom, how frequently, and by how much bandwidth is being consumed.

- **Historical look-back –** Understand usage trends and spot anomalous activity.

Wire Data Analytics for Cloud Applications

- Track compliance with company policies

- Identify cloud applications and users consuming excessive bandwidth

- Understand usage to plan and adjust network capacity

- Easily define other cloud-based applications to monitor
