

Universal Payload Analysis

Extract valuable data communicated over virtually any TCP-based or UDP-based protocol

With the industry's first real-time universal payload analysis, IT teams can program the ExtraHop platform to analyze virtually any message or transaction based on UDP or TCP in real time and to extract critical metrics. This capability expands the breadth of ExtraHop's wire data analytics, enabling organizations to monitor custom protocols or protocols not supported natively.

Example Use Cases

- Performance monitoring**
 Monitor the health and performance of legacy systems that have few other monitoring options.
- Business intelligence**
 Track business metrics communicated over custom protocols to Internet-connected devices.
- String matching**
 Look for specific substrings that can signal malware or compliance breaches.

Try It for Yourself!

Explore the ExtraHop platform with our interactive online demo.

Programmable Platform

With ExtraHop's universal payload analysis capabilities, you can program the ExtraHop platform's real-time stream processor to parse protocols that are not supported natively. Universal payload analysis supports any Layer 7 protocol based on TCP or UDP. For cases in which the payload is encapsulated, universal payload analysis still can record header information.

Stay in Control

Universal payload analysis puts you in control. Never again will you have to wait for a vendor to add support for a technology that is critical to your business. For example, companies that rely on custom-developed protocols can use universal payload analysis to quickly gain insight into those communications.

Community-Driven Innovation

ExtraHop platform extensions that take advantage of universal payload analysis can be shared with and improved upon by the ExtraHop community.

ExtraHop has developed example bundles that use universal payload analysis for ICAP and syslog. Check out these bundles and others in the Solutions Bundles Gallery:

<https://www.extrahop.com/community/bundles/>

Modular Protocol Framework						
DNS	LDAP	HTTP	Postgres	HTTP-AMF	DHCP	NVGRE
Telnet	MySQL	SSL-TLS	ICMP	FTP	DSCP	Cisco FabricPath
MS RPC	SMTP	Kerberos	PCoIP	POP3	VXLAN	Active Directory
SSH	MSMQ	Memcache	CIFS	SMP	Diameter	RADIUS
IBM MQ	MSMQ	FIX	HL7	Citrix ICA	MongoDB	Active MQ
Oracle	Sybase ASE	Sybase IQ	MS SQL	DB2	iSCSI	NFS
Informix	VoIP: SIP	VoIP: RTP	VoIP: RTCP	VoIP: RTCP XR	DICOM	Redis

Universal Payload Analysis

ICAP, IMAP, DCE/RPC, Finger, NTP, SCADA, Syslog, XMPP, and more

Universal payload analysis makes it possible to support virtually any protocol based on UDP or TCP.
