Defend Your Cloud Without Friction

Cloud security teams are outnumbered by adversaries and developers, and the traditional approach of prevent and protect can’t keep up with the current realities of unmanaged assets and advanced threats. Without visibility into east-west traffic inside the perimeter and the ability to analyze packets in the cloud, organizations are vulnerable to attacks.

ExtraHop Reveal(x) 360 is a SaaS-based cloud threat defense solution purpose built for Google Cloud, multicloud, and hybrid environments. With Reveal(x) 360, security teams gain the complete visibility they need to understand and secure assets in Google Cloud environments, including compute instances, containerized workloads, data storage services, and more. Available continuous PCAP and access to 90 days of records securely hosted in the cloud enable always-on incident response and rapid forensic investigation.

Improve your situational awareness, gain actionable intelligence, and quickly zero in on malicious activity like lateral movement, command and control communication, and data exfiltration. Reveal(x) 360 uses cloud-based machine learning for real-time behavioral detections that identify threats other tools miss, enabling security teams to respond with speed and confidence. By natively integrating with Google Cloud Packet Mirroring, Reveal(x) 360 provides frictionless cloud threat defense without the need for agents.

USE CASES

- Advanced Threat Detection
- Inventory & Configuration
- Dependency Mapping
- Workload & Data Monitoring
- Forensic Investigation
- Compliance & Audit
- Container Security
- Vulnerability Assessment
- Threat Hunting

Accelerate and Secure Innovation in Google Cloud

Reveal(x) 360 unifies visibility, threat detection, investigation, and response across hybrid and multicloud environments without slowing down innovation. SaaS delivered and agentless, Reveal(x) 360 lowers capital expense and total cost of ownership while delivering highly elastic cloud threat defense that scales up or down to meet your needs.

**Reduce Tool Sprawl**
Provide security and IT teams with a single source of truth that works across hybrid and multicloud environments.

**Defend Containers**
Observe, understand, and secure containers and services in a single management pane.

**Quickly Access Forensics**
Continuous packet capture and access to 90 days of records enables fast, thorough investigation.

**Respond Faster**
Accurately determine the scope of incidents and quickly implement the appropriate response.

**Secure Cloud Migration**
Automatically discover and classify assets while continuously monitoring for threats and slowdowns.

**Eliminate Friction**
Agentless deployment enables security to do their jobs without impacting development or operations.
